**LB(Luria-Bertani Medium) plates contain 1% Trypton, 0.5% yeast extract, 1.0% NaCl and 1.5% agar with a final pH of 7.0 unless otherwise specified. All plates are made of the highest quality ingredients available and tested for solubility, clarity, color, pH and the growth or inability to grow of appropriate recombinant strains of E. coli to demonstrate the efficacy of the antibiotics and indicator dyes. The plates are dated and guaranteed for 8 weeks from the date of shipment although many antibiotic plates can be stored at 4°C for a longer time. **Custom orders are welcome with no minimal order. Other antibiotics (e.g. Zeocin), dyes, growth supplements or their combinations are available to meet your needs.*
